Skills

C#, Visual Basic, ASP.Net, Javascript, HTML, CSS, jQuery, .Net Framework, MariaDB/MySQL, Microsoft SQL, Microsoft Access, Stimulsoft, Crystal Reports

Experience

ECI Software Solutions / Senior Developer

February 2013 - Present, Sharonville, OH

- Gather requirements from customers and created custom reports and utilities in VB6 and C#.
- Interpret VB6 code to recreate old custom reports and utilities in C# for use on our new web-based product.
- Create, improve, and maintain several internal utilities used to save time during various stages of developing custom reports and utilities.
- Interview new employees and train them on project architecture and required processes. Developed said training myself, on many occasions.
- Provide additional one-on-one training and supervision for employees having trouble with specific processes.
- Help to develop new processes for our department to make things run more efficiently or to more easily track important information between our department and others.

Cadre Computer Resources / Software Developer

April 2009 - October 2012, Cincinnati, OH

- Developed new features and debugged existing features of VB.Net application used internally for many aspects of day-to-day operations, including time tracking, sales reporting, email distributions, inventory tracking, and more. It was used by upper management to see how individual salespeople were performing and to get a wider view of how the company was performing as a whole.
- Worked independently to create and implement the aforementioned inventory tracking system.
- Helped to upgrade the application from .Net Framework 1.0 to 2.0.
- Developed a new bridge application to automate the process of importing and exporting data between our main application and a third party accounting software.

Anchorage School District IT Department / Programmer's Assistant

January 2006 – May 2006, Anchorage, AK

- Computer Programming mentorship through my high school which became a part-time job.
 - Helped test and debug the school district's main website and many minor sites, mostly written in ASP.Net.
 - Redesigned an existing MS Access database application used to track employee mileage in the field for expense reporting.
 - Designed and built a new VB application to track technical support inquiries submitted to our department.
-

Awards

Certificate of Excellence

December 2018, ECI Software Solutions (then Shoptech Software)

Award was received for going above and beyond my job responsibilities that year. This was the year we began a major change in development environment and I was one of two at the forefront of getting that environment set up and usable by the rest of the team.

Education

Cincinnati State Technical and Community College / Associate of Applied Science in Software Engineering Technology

May 2011, Cincinnati, OH
