Experience

ECI Software Solutions / Senior Developer
February 2013 - Present, Sharonville, OH

- Gather requirements from customers and create custom reports and utilities in VB6 and C#, with Crystal Reports and Stimulsoft reporting softwares.
- Interpret VB6 code to recreate old custom reports and utilities in C# for use on our newer web-based ERP solution, in an MVC style code base.
- Creat, improve, and maintain several internal utilities used to save time during various stages of developing custom reports and utilities.
- Interview new employees and train them on project architecture and required processes, often using training courses developed myself.
- Provide additional one-on-one training and supervision for employees having trouble with specific processes.
- Help to develop new processes for our department to make things run more efficiently or to more easily track important information between our department and others.
- Tapped for promotion to Team Lead, once position is created for our team.

Cadre Computer Resources / Software Developer
April 2009 – October 2012, Cincinnati, OH

- Developed new features and debugged existing features of internal-use VB.Net application. This application was used for many aspects of day-to-day operations, including time tracking, sales reporting, email distributions, inventory tracking, and more. It was a valuable tool for upper management to track individual sales performance and to get a wider view of company performance as a whole.
- Worked independently to create and implement the aforementioned inventory tracking system.
- Helped to upgrade the application from .Net Framework 1.0 to 4.0.

- Took over as project manager and lead developer for a new bridge application to automate the process of importing and exporting data between our application and a third party accounting software.

Anchorage School District IT Department /
Programmer's Assistant

January 2006 – May 2006, Anchorage, AK

- Computer Programming mentorship through my high school which became a part-time job.
- Helped test and debug the school district's main website and many minor sites, mostly written in ASP.Net.
- Redesigned an existing MS Access database application used to track employee mileage in the field for expense reporting.
- Designed and built a new VB application to track technical support inquiries submitted to our department.

Awards

Certificate of Excellence
December 2018, ECI Software Solutions (then Shoptech Software)

Award was received for going above and beyond my job responsibilities that year. This was the year our team began our switch to the company's new web-based ERP solution and I was one of two at the forefront of getting our new development environment set up and training the rest of the team on its use.
